

Error report

Whilst working with the arrowhead framework I have not found any noteworthy errors. I would have liked to have seen a better user guide, currently most if not all of the information I gathered for the project were found through the demo projects. While that is great I would have liked it to be more of an extra addition to a user/beginners guide and not the main source of information. I also found it hard to follow the documentation model and further information and maybe an example would have been of great help.
